## PERSONAL

In my career, I created end-to-end ERP applications for manufacturing companies and was part of the engineering team of a big refactor project of many e-commerce websites of the biggest fashion & style group in Brazil, Arezzo, with thousands of monthly visits, turning their monolith application to a headless repository.

I'm an aspiring writer, you can see some texts I published, abou tech and non-tech stuff, on my blog inside my website.

I trust software can make the world better for everyone.

## WORK EXPERIENCE

### Front-end Engineer

@CWI Software | *February 2020 - Present*

At CWI, I work as an outsourced employee for Arezzo&Co, **the biggest fashion & lifestyle group in Brazil**, with more than **900 stores** in the whole country and even stores in the US (Schutz stores in NY, Beverly Hills, and more cities), obtained net revenue of **more than a billion BRL in 2022**. Arezzo owns 13 other brands and I worked on 9 of them e-commerce websites that add up to **more than 100,000 monthly visits** . Some of them are **Vans**, Arezzo, Alexandre Birman and ZZMall. I'm working on the "future e-commerce" team, where we're rewriting the entire website structure (which was built in Backbone.js and JSP) using new technologies (**React** with **Typescript** and **Next.js**) and also turning it from a monolith to a headless repo.

I was responsible for planning and refining tasks (choosing how much time it was supposed to take and writing clear instructions) and also coding. I was an important team member for ZZPay (Arezzo's e-wallet feature focused on cashback) planning and coding almost the whole structure, using ReactJS, Jest, and Sass, and also to Tyler (Arezzo's design system which saved us a lot of time and meets with the UX team) bringing the idea to the team and suggesting story book to do it.

### Full-stack Engineer

@Kunden Systems | *February 2018 - February 2020*

Kunden Systems is a software house focused on business management applications, like ERP, production control panels, BI tools, and everything relevant to managing a manufacturing industry.

I created new web applications which helped Kunden's clients to speed up their whole process, from the production to the delivery of their products. I was an important member of a team that built an entire ERP system for a company that exported shoes to another country. We built it entirely with **AngularJS** (version 1.x), **NodeJS** and **Express**.
